Q76 X27 (2001.02.20) A47K 10/48, F26B 3/02

Novelty: Body drier consists of a controller (3) to control the temperature and flow velocity of air from the outlet (5) in order to maintain high temperature at beginning and low temperature after preset time.

Detailed Description: The outlet formed on the front surface of the drier is distributed to exit hot air on human body except head. The controller controls the supply of electric power to blower motor (11) and electric heater (2) to control the temperature and flow velocity.

Use: For drying wet clothes and body.

Advantage: Drier can be comfortable used to dry human body wearing wet clothes.

Description of Drawing(s): The figure shows the perspective diagram showing air drier.
